## Stainless Steel Products

### PREVENTION OF TEA STAINING

This document is to become a standard attachment to all stainless steel quotes and accompanies an *ASSDA Technical Bulletin - Preventing Coastal Corrosion (Tea Staining) February 2010*.

It may be in your best interest to add this document or similar to your maintenance manuals to pass onto builders.

**Tea Staining can only be prevented via regular maintenance - the duration required is dependant on many factors including: location to marine, atmospheric conditions and the finish of materials chosen.**

The smoother the finish of material the more resistant it is to tea staining.

List of finishes from most resistant to least resistant

Electropolished

No 8 Finish - Mirror (1000 grit)

2B Finish

Bright Annealed Finish

No 4 Finish 320 - 400 grit

#### **Gnerally what we stock and supply**

Gutters & Flashings	2B and No 4 Finish
.55mm Downpipe	2B and No 4 Finish
1.6mm Tube	No 4 Finish
Flat bar brackets	No 4 Finish
Laser cut brackets	2B and No 4 Finish

If products are specified outside of our regular finishes above - longer lead times may apply

**It is very important that we stress the most critical preventative tool to avoiding tea staining is regular cleaning of the products once installed**

**Futher information is available at [www.assda.asn.au](http://www.assda.asn.au)**
